

Polyamide
**TENNIS
RACQUET
STRINGS**

Polyamide

Polyamide – like nylon, a product of the chemical industry – has in the course of time increasingly come to the fore. Numerous products manufactured from this plastic have conquered the market and are being used because of their excellent properties.

This also applies to

Strings of Tennis Racquets, where it is of especial importance that the surface should be smooth and perfect.

Just as formerly a tennis racquet strung with catgut was a "must", so nowadays it is almost exclusively the tennis racquet string made of polyamide.

Bad tools reduce efficiency. – How many matches are lost due to insufficient attention to the quality of the racquets. Use, therefore, tennis racquet strings made of polyamide !

We supply these in 1.35 mm dia. thickness, in coils of 12 metres, sufficient for one stringing.

According to customers' preferences they are supplied in the following colours:

colourless, chamois, golden-yellow, azure and pink, but also transparent.

In deference to the increasing popularity of the game of Badminton we also supply

Badminton racquet strings. These are supplied in thicknesses of

0.80, 0.90 and 1 mm diameter, in coils of 12 metres each, colourless or in any required colour.
